QuoVadis does not set reliance limits for Time-stamp services, however reliance limits may be set by applicable law or by agreement.

The QV-TSA assures time with  $\pm 1$  second or better of a trusted UTC time source. If a trusted UTC time source cannot be acquired the time stamp will not be issued. The time included in a Time-stamp is the time of processing by the TSU, not the time of submission nor of acceptance.

Subscribers must verify that the Time-stamp has been correctly signed and check that the Private Key used to sign the Time-stamp has not been revoked. The Subscriber shall use the QuoVadis Time-Stamping service in accordance with the QV-TSP/PS, CP/CPS, ETSI EN 319 421 and the relevant provisions in ETSI EN 319 422.
